

REMOTE CONTROL START&STOP HI-TECH VACUUM

The remote control allows the automatic turning on and off of the vacuum simultaneously with the machine tool to which it is connected.

The vacuum can be turned on in four different ways via a:

- a) Clean contact.
- b) 24 VAC contact.
- c) 24 VDC contact.
- d) 230 V contact.

The advantages:

- Energy saving; the vacuum is only turned on simultaneously with the machine tool
- Noise-level reduction as the vacuum is turned on (and making noise) only with the machine tool on as well
- Operator time optimization since they will no longer have to manually turn on/off the vacuum
