

GENERAL FEATURES

- Providing 2 and 4 axis CNC controlled corner cleaning movement and the 4 corners of PVC profiles welding line ...
- Yilmaz cleaning machine custom profiles programming
- Capable to operate manually and automatically,
- Automate the recognition profile,
- Automatic cleaning blade profile with 11 teams,
- separate cleaning blades for colored and white profiles,
- Profile wing width and height chassis control sensor,
- Automatic bearing lubrication system, Windows-based touch-screen computer,
- To be able to transfer programs via USB memory,
- Technical support network with remote connection
- movable control panel,
- The speed can be changed during the process,
- 220 frames / 8 hours (608 CNC)
- 270 frames / 8 hours
- The display of alarms and alerts can be seen,
- Phase control system,
- Low pressure control system,
- Automatic profile flip robot can transfer the end of the 4 corners of the cleaning line feature
- Automation system that allows movement in three axes (X, Y1, Y2),
- Supply range from 0.2 to 2 mm Yilmaz Machine-specific automatic switching,
- Manual and automatic measurement by entering the ability to work with barkdod reader
- Topal able to boil the door,
- Can be entered via the display of the welding parameters and can be saved,
- Quickly and easily replaceable Teflon ironing the feature to create 1,000 Proflin the prescription,
- To follow up on the screen during the process of processing time,
- Possibility to place easy profile in long dimension,
- mm or inch operation of the

PVC WELDING AND CORNER CLEANING LINE
